

Maximize Productivity

Free-up your Spraybooth.

Smartair allows the paint finishing repair & touch-up process to be done in workshops or other suitable areas without the need for a conventional spraybooth.

Smartair features a unique hood and masking design. The masking is quickly and easily folded over the hood, creating an enclosure. When the extraction system is switched on, air is funneled into the open aperture of **Smartair**, creating a flow of air into the **Smartair** hood. The **Smartair** extraction system captures and disperses paint overspray and fumes, protecting the working environment.

Keeps you safe and fully compliant

Smartair is designed with a 2-stage filtration system, that complies with the emissions regulations set out in the Environmental Protection Act and is well below the particulate emission levels of 10mg/m³.

The ETL listed **Smartair** also satisfies relevant Health & Safety directives and in independent tests, the product provided a Workplace Exposure Limit (WEL) 74% below the permitted maximum. The system features a 25 foot hose for connection to the **Smartair** extraction tower that vents external to the building.

Optional,
Smart IR Curing

Extraction Tower

Ideal for Industrial Repair and Touch Up Applications

- ◆ Aviation & Aerospace
- ◆ Marine
- ◆ Agricultural
- ◆ Mass Transit Rail
- ◆ Commercial Truck, Bus & RV's
- ◆ Wood Furniture
